TECHNICAL INFO

Invertech

PATENTED TECHNOLOGY, COMBINING PU LACQUER AND EMBOSSING.

In 2020, Lentex developed the Invertech technology for the production of sheet vinyl. It is a unique technology, combining PU lacquer and mechanical embossing. Invertech brings both aesthetic and functional benefits. With Invertech our products are produced **without glossy marks or cloudy spots** and offers a significant **protection against dirt and scratches**. The formula of the PU lacquers ensures no breaking of the protective layer during installation.

INVERTECH

An even, dirt-resistant layer

Thanks to our unconventional and innovative approach, the Invertech technology was created, combining all the features of lacquered and mechanically embossed floor covering. By improving the process, defects associated with excessive overflow of the protective layer have been eliminated, which resulted in local "turbidity". The problem of local lack of PUR layer on surface of the floor covering was also solved. This ensures that the entire surface of our products has been **covered with an even, durable and dirt-resistant protective layer**, which was developed especially for the new technology.

TECHNICAL INFO

Cold welding Invisiweld

Invisiweld technology gives the ability to achieve an almost imperceptible join with all IVC Commercial Heterogeneous Vinyl floor coverings. Fast, clean and easy to use, Invisiweld is economical and leaves a seamless, strong and watertight join.

Steps

TECHNICAL INFO

Hot welding

Ø 4 mm x 100 m length

We offer a wide range of welding rods for colour-matching or contrasting with our heterogenous sheet vinyl. Either way, the result will be a floor that is both strong and beautiful.

TECHNICAL INFO

Installation & maintenance

To help you implement its high-quality products, IVC Commercial offers you a tailor-made service. For each category of installation type, we provide you with an installation guide containing all necessary information for proper installation, cleaning and maintenance.

Installation direction

Always follow the installation instructions about direction:

REVERSE (B) ↑↓
DO NOT REVERSE (A) ↑↑
L= Left, R= Right

The arrow on the vinyl roll indicates the direction of production.

Consult and download our guides on our website

SUSTAINABILITY

One group, one vision

In 2022 Unilin launched One Home, our group-wide sustainability strategy with ambitious targets in several domains. We look into the environmental impact of our products and production processes, but also at how we live at home, at work and on our planet.

ONEHOME

PLANET HOME

Greenhouse gas emissions must be reduced or even completely eliminated. This is a major challenge for the manufacturing industry, as we still too often burn fossil fuels and end-of-life products. We need to switch to circularity, using **renewable or recycled materials** and making **recyclable products**.

YOUR HOME

A healthy, comfortable and sustainable living environment is more important than ever. The products we make must provide **added value to our customers**, without compromising on **health, comfort or sustainability**.

OUR HOME

Our company is a second home for **more than 8,000 employees**. We aim to create a **positive, stimulating and safe working environment** where they feel good and valued; an environment where everyone can challenge themselves and continue to grow. Our community, municipalities and neighbours also form a significant part of our story.
